Firewall (security groups) Info

A security group is a set of firewall rules that control the traffic for your instance. Add rules to allow specific traffic to reach your instance.

☒ Create security group

☐ Select existing security group

We'll create a new security group called 'launch-wizard-1' with the following rules:

☒ Allow SSH traffic from

Helps you connect to your instance

Anywhere

0.0.0.0/0

☒ Allow HTTPS traffic from the internet

To set up an endpoint, for example when creating a web server

☒ Allow HTTP traffic from the internet

To set up an endpoint, for example when creating a web server

⚠ Rules with source of 0.0.0.0/0 allow all IP addresses to access your instance. We recommend setting security group rules to allow access from known IP addresses only.

Connect to instance [Info](#)

Connect to your instance i-03f1309d625995a51 (ubuntu_inst) using any of these options.

EC2 Instance Connect

Session Manager

SSH client

EC2 serial console

Instance ID

 i-03f1309d625995a51 (ubuntu_inst)

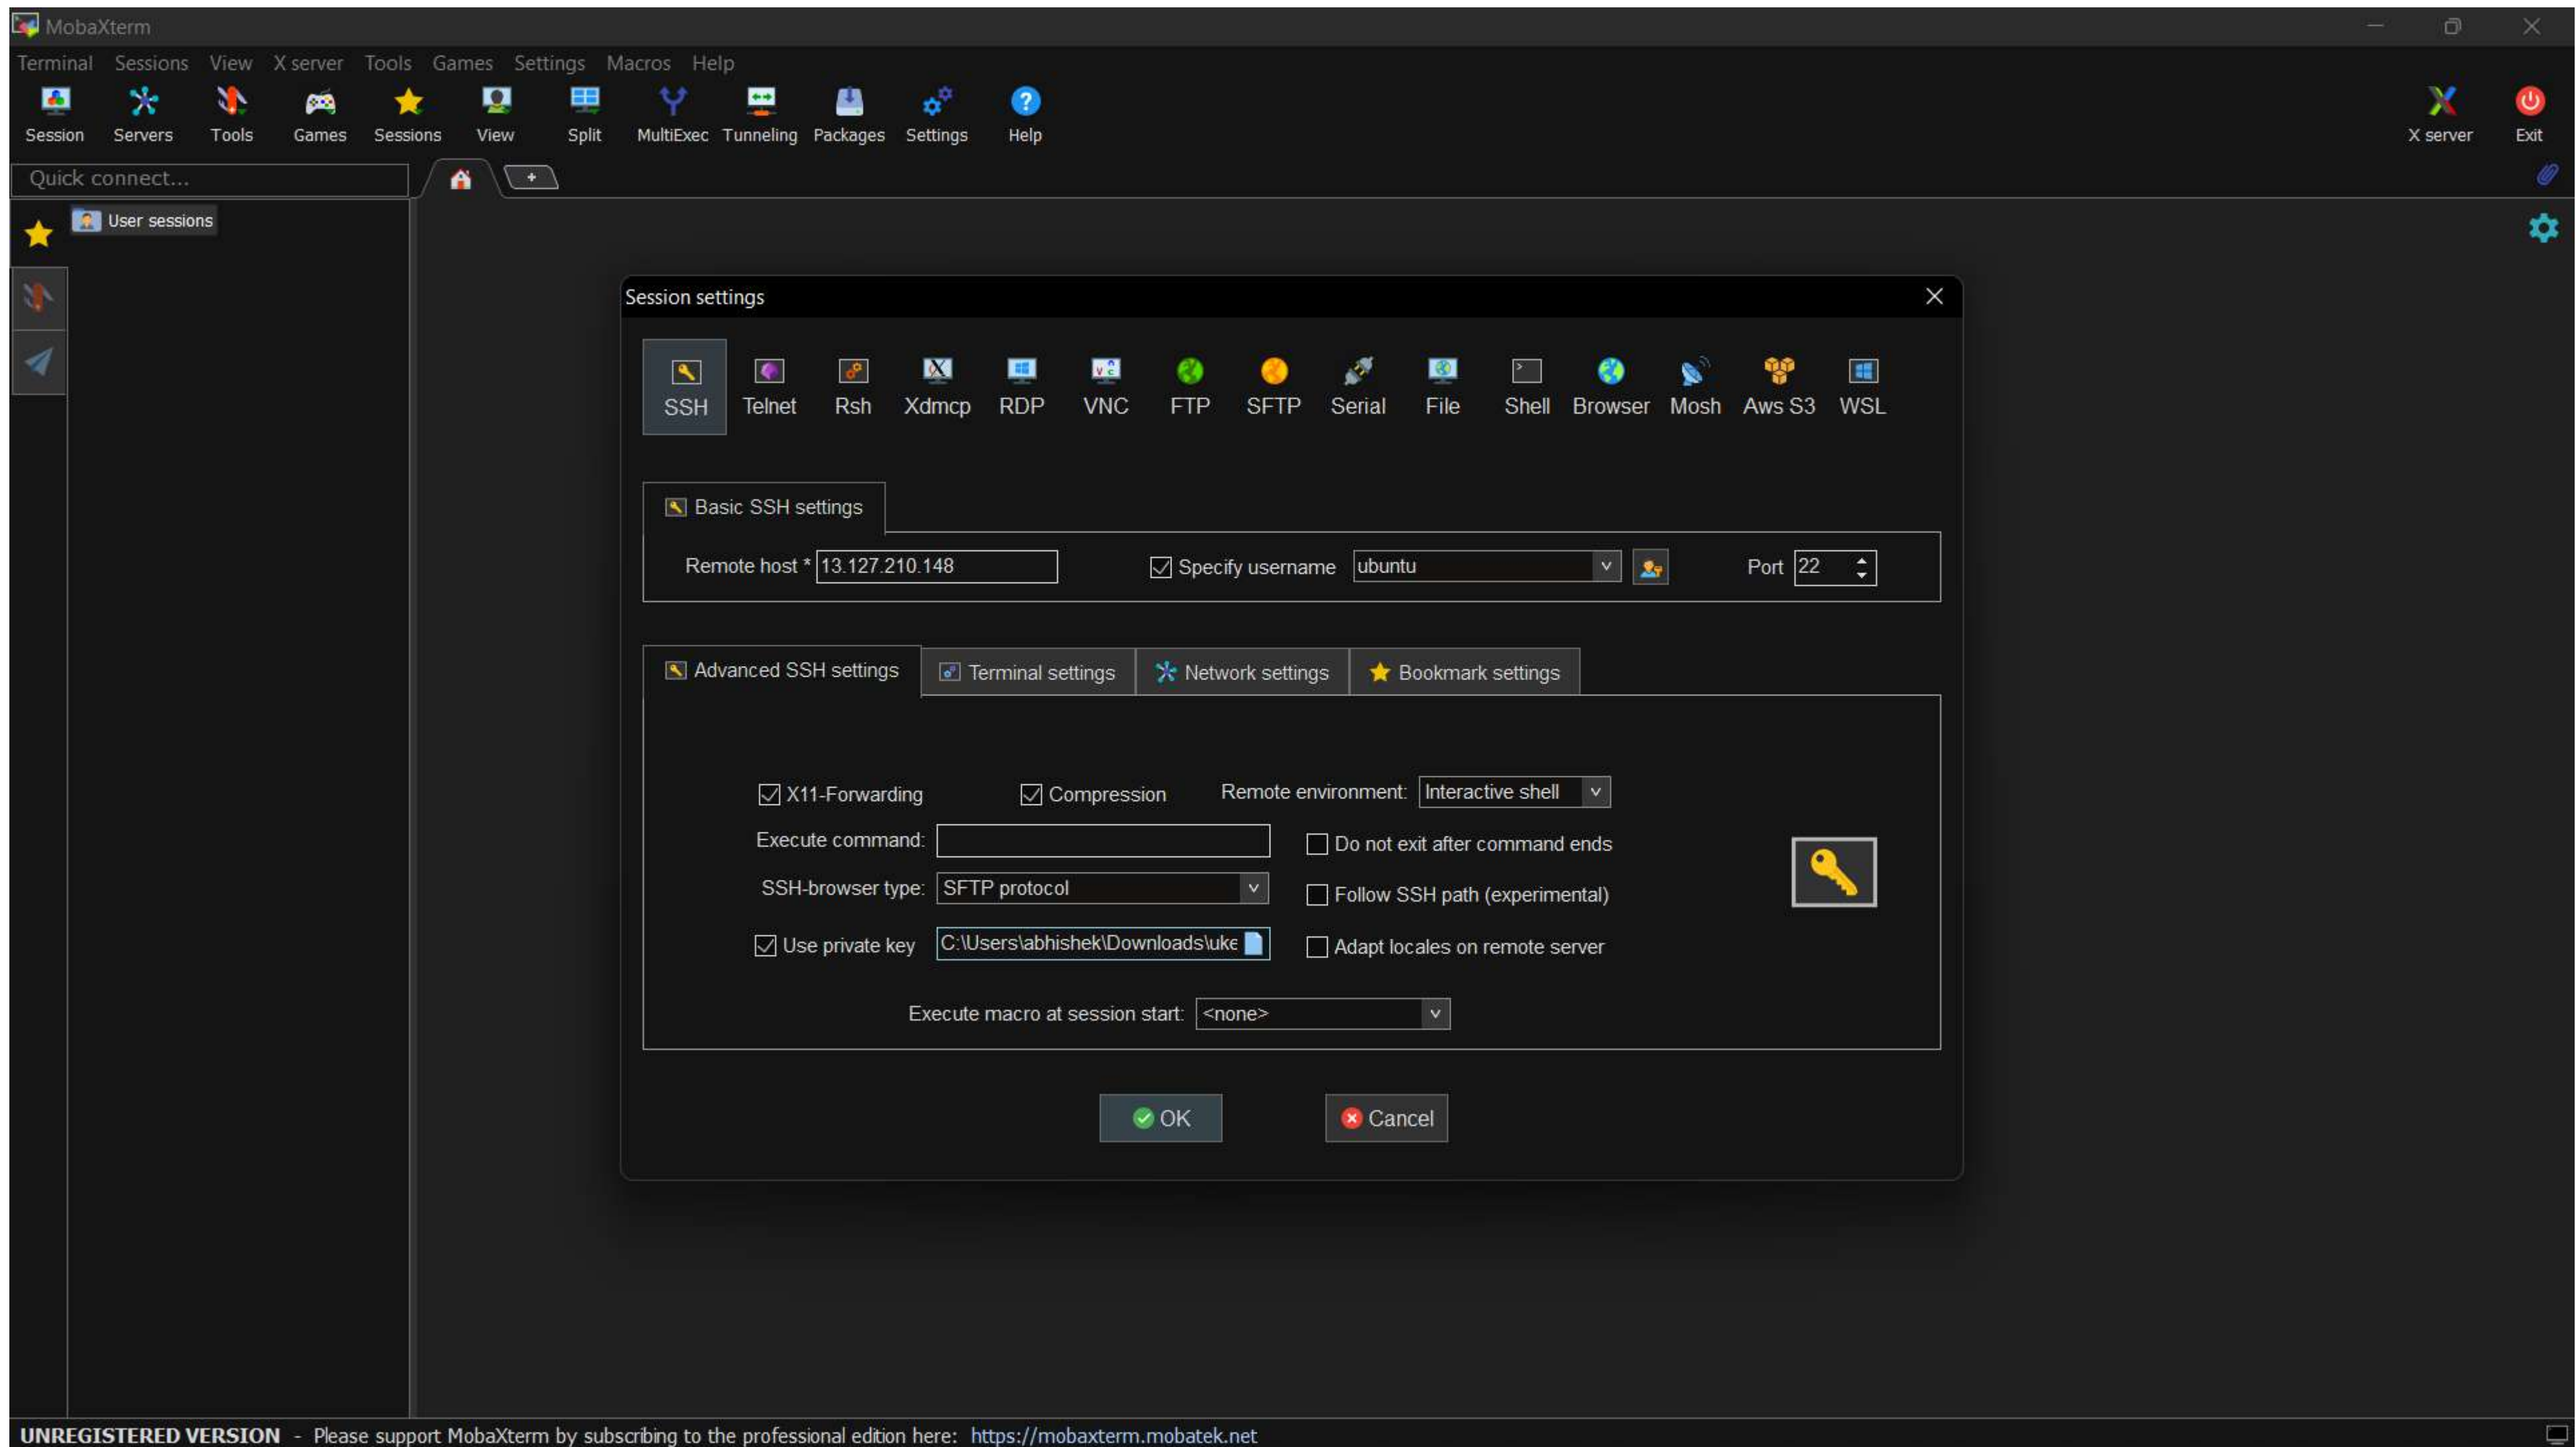

1. Open an SSH client.
2. Locate your private key file. The key used to launch this instance is ukey.pem
3. Run this command, if necessary, to ensure your key is not publicly viewable.
 `chmod 400 ukey.pem`
4. Connect to your instance using its Public DNS:
 `ec2-13-127-210-148.ap-south-1.compute.amazonaws.com`

Example:

 `ssh -i "ukey.pem" ubuntu@ec2-13-127-210-148.ap-south-1.compute.amazonaws.com`

 **Note:** In most cases, the guessed user name is correct. However, read your AMI usage instructions to check if the AMI owner has changed the default AMI user name.

Cancel

3. 13.127.210.148 (ubuntu) × +

The screenshot shows the Nautilus file manager window. The address bar at the top indicates the current location is `/home/ubuntu/`. The left sidebar shows the 'Home' view. The main pane lists the following items:

The screenshot shows the Nautilus file manager interface. The address bar at the top displays the path `/home/ubuntu/`. Below the address bar, the file list is shown with the following items:

- `..` (parent directory)
- `.cache` (folder)
- `.ssh` (folder)
- `.bash_logout` (file)
- `.bashrc` (file)
- `.profile` (file)
- `.Xauthority` (file)

```
ubuntu@ip-172-31-14-114:~$ sudo apt install nodejs

- Follow terminal folder

The image shows a screenshot of the MobaXterm application window. The title bar at the top reads "13.127.210.148 (ubuntu)". Below the title bar is a menu bar with options: Terminal, Sessions, View, X server, Tools, Games, Settings, Macros, and Help. A toolbar with various icons is located below the menu bar. The main window is divided into three panes. The left pane shows a file explorer view of the "/home/ubuntu/" directory, listing files like ".cache", ".ssh", ".bash_logout", ".bashrc", ".profile", and ".Xauthority". The middle pane shows a terminal session with the prompt "ubuntu@ip-172-31-14-114:~\$". The user has entered "node -v", and the output is "v12.22.9". The right pane is empty. At the bottom of the window, there is a status bar that reads "UNREGISTERED VERSION - Please support MobaXterm by subscribing to the professional edition here: https://mobaxterm.mobatek.net".
